Abstract :

In this project, we are going to build a website where following features are included

- 1. Finding Destination**
- 2. Hotels booking**
- 3. Flights booking and various others features**

In home page there will be options for booking destinations on clicking which will take the customers to hotel booking page where customers can book hotels of their choice. If any customers is not decided where to travel, then we will be having one section for helping them in order to decide where to go. There will be one more option for flight booking on home page for customers where they can book flight according to their convenience. We are including various offers on flights, hotels and destinations to attract customers to book hotels & flights when they come to our website.

We are using **Python** as a programming language and **Django** as a framework.

No of Tables :- 10 (minimum)

Frontend :- HTML, CSS, JavaScript

Backend :- MySQL
